# Short Interval Management

---

## Performance monitoring, plan the improvement actions, control results.

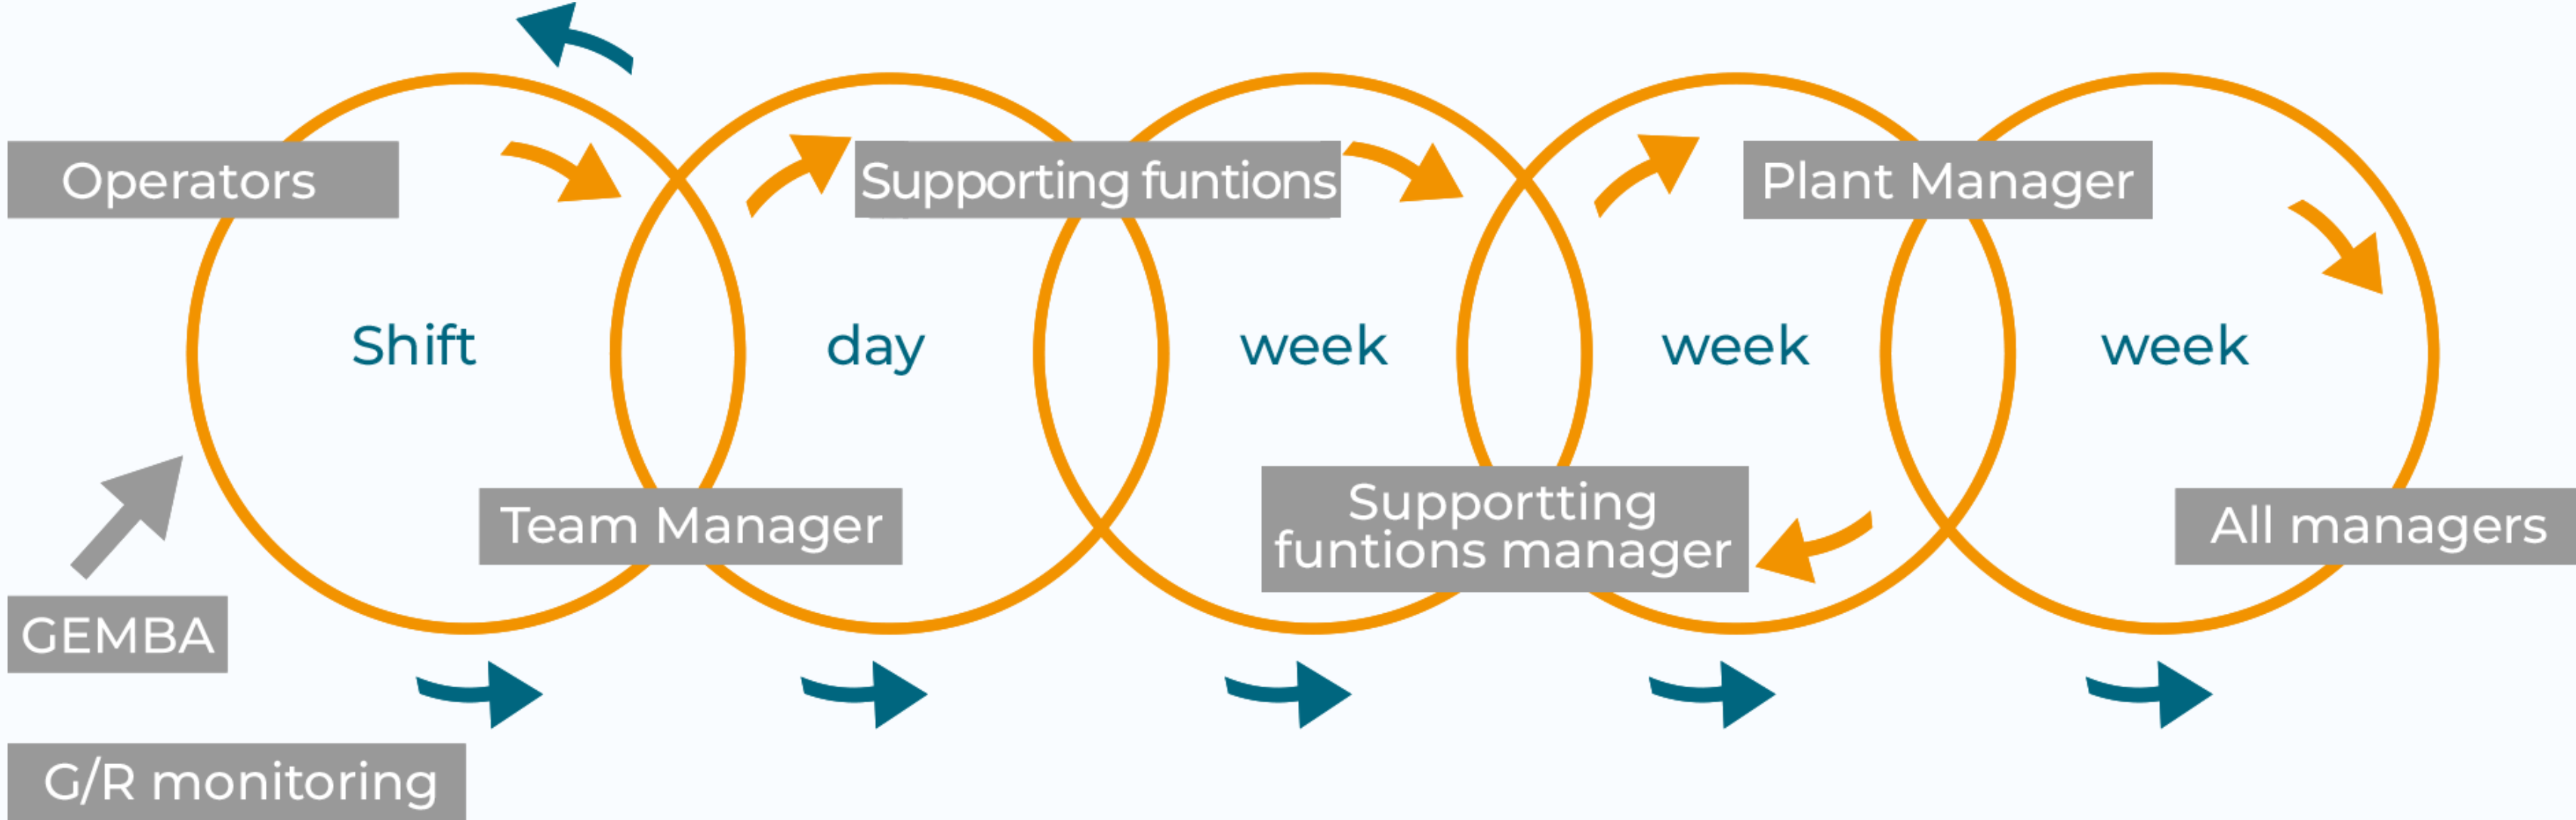

Smart GIC is the technological solution that supports the [Short Interval Management\\*](#) system, an operational management approach related to the [Lean Manufacturing](#) method that focuses on continuous improvement.\*

Short Interval Management allows companies greater agility [to plan work, people and other resources](#) in order to focus efforts on permanent value creation.

SIM consists of a [cycle of periodic on-site meetings](#) scheduled at [short time intervals](#) (shift, day, week, etc.) in which people from different areas participate.

The objective of these meetings is to collectively analyze data on the process performance, decide corrective actions for immediate application and coordinate teams.

# How?
